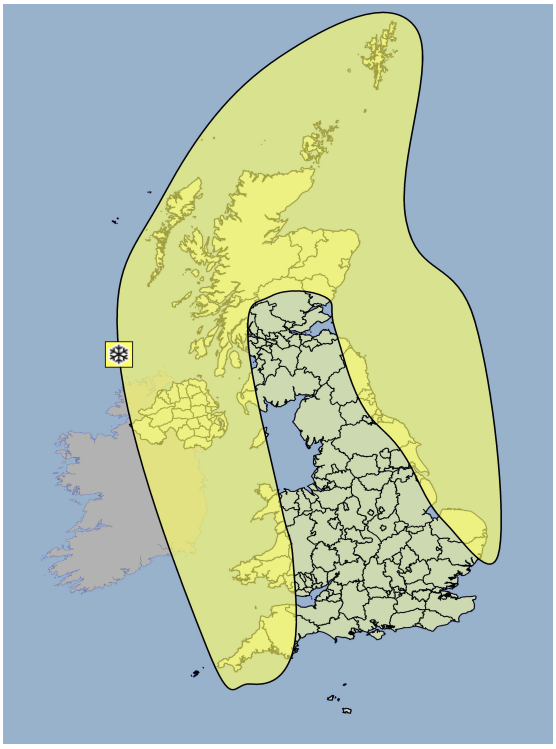
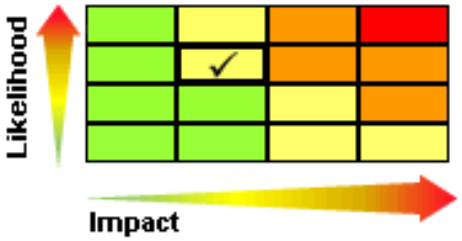
National Severe Weather Warning Service





Chief Forecasters Assessment
A very cold airmass will continue to spread southwards from Scotland and Northern Ireland across the remainder of the UK on Sunday accompanied by strong winds. Frequent showers are likely to form in this airmass, primarily affecting northern parts of Scotland and Northern Ireland but also running along eastern and western coastal districts of England and Wales at times. With the cold air snow is likely to accumulate even to low levels wherever showers affect. Periods of enhanced snowfall are possible within this general flow, but details of these are very uncertain at this time. As such this Alert is likely to be updated and refined in the coming days.

There is the potential for disruption throughout this period due to the accumulating snow and ice but also with temporary blizzard conditions leading to very difficult driving conditions.

The Met Office have issued a **Yellow Alert** of **Snow**

Valid from **00:15 on Sun, 01st Feb 2015** until **23:45 on Mon, 02nd Feb 2015**

Further snow showers will affect parts of Scotland and Northern Ireland on Sunday leading to some locally large accumulations, and the showers may spread along eastern and western coasts of England and Wales. The showers will be associated with strong winds so drifting and temporary blizzard conditions are possible as well as icy stretches. The public should be aware of the potential for disruption from these conditions.

Snow showers are likely to continue to affect similar areas into Monday bringing further accumulations.

This is an update to the Alert issued on Thursday to reduce the extent of the yellow area across the Westcountry and east Wales, whilst more of northwest Wales and west Cornwall
